### Abstract

The main purpose of the study was to investigate aggression level of Team game and Combact Game. The samples consisted of thirty (15 Team game and 15 Combact Game) players who have study in Govt. PG College, Obra. The age ranging between 18 to 28 years. To assess the aggression level of the players, Sports Aggression Inventory questionnaire was developed by Anand Kumar and Prem Shanker Shukla was used. To analyze the data Mean, SD, and 't'- ratio were computed. Results of the analysis showed that was no significant difference in the aggression level of Team game and Combact Game.

**KEYWORDS:** aggression, Combact Game and Team game

---

### Introduction:

The word Aggression comes from the Latin word aggress, 'ad' (to or toward)' and grader (walk). Literally then the word means to "to walk towards or approach", to move against or to move with intend to hurt or harm. Most psychologists describe aggression in terms of behavior. Aggression behavior is associated with destructive acts, sexual attacks, prejudiced, speech, genital activities, drug and alcohol addictions, sports and exercise, crying, complaining, and waging wars and so forth. There is no simple behavior that may be described under the rubric aggression.

Aggression is a topic of paramount importance to the human race. We pride ourselves on humane creatures who have left the brutal jungle to establish "civilized" societies. But the sad reality is that no other animal species even comes remotely close to our record of violent and harmful acts against of our own species. Although fights to the death do sometimes occur over mates and territory in lower mammals, no species rivals the frequency of human aggression in my life time alone, hundreds of millions of humans have been killed by other humans in wars, revolutions, and act of terrorism. Violent crimes and murder have always been a part of human societies, but in recent years their frequency has reached unprecedentedly levels in many parts of the world. In spite of recent small declines, in the United States. Violence has become the second most common causes of death among 15 to24 years old after accidents and it is the leading cause of death among African, American males perhaps most incomprehensible is the frequency of aggression towards members of one's own family members against another and some 3percent involves the murder of a child by a parent. Each year in the United States, 4 million husbands and wives violently attack each other resulting in ever injuries in a quarter million of the cases each year, to 2 million are kicked, beaten, or punched by their parents:

**Purpose:**

The main purpose of the study was to find out the aggression level of Team game and Combact Game.

**Methodology:**

The samples consisted of 30 (15 Team game and 15 Combact Game) sportsman. All of them were from Govt. PG College, Obra. The age of the sportsman were ranged from 18 to 28 year. To asses the aggression level of Team game and Combact Game, the Sports Aggression Inventory by Anand Kumar and Prem Shanker Shukla was used. The test consists of 25 statements related to aggression. Testing was carried out in group of 2 sportsmen i.e. Team game and Combact Game and score sheet evaluated in accordance with the instruction laid down in the manual of the test. The data collected was analyzed by using t-test.

**Findings:**

The t-test was used in the analysis of the data; the findings of the study are clearly indicated of the table.

**Table 1**

**SIGNIFICANCE OF DIFFERENCE BETWEEN TEAM GAME AND COMBACT GAME PLAYER ON AGRESSION**

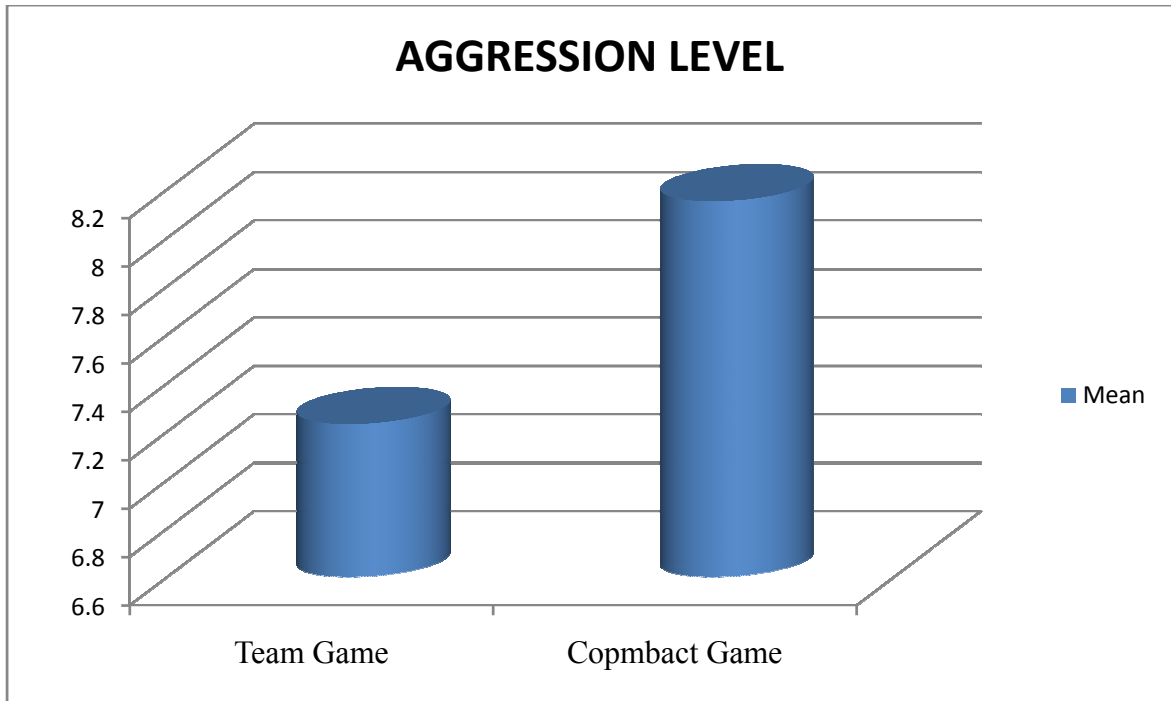

Subjects	Mean	Std. Deviation	Mean Difference	Std. Error Difference	T-ratio
Team Game	7.23	0.871	0.92	0.317	3.06*
Copmbact Game	8.15	0.869			

\*Significant

Tabulated't'.05 (28) = 2.048

Hence, the value of calculated' is significantly higher than the value of tabulated'. It means that there was significant difference among the mean of the both groups.

The graphical representation of Aggression Level of Team Game and Combact Game Players has been presented in figure 1.

**Figure 1 :** Aggression Level of Team Game and Combact Game Players  
Conclusions:

**Conclusions:**

Thus, it was concluded that the Combact Game Players has more aggression than the Team Game.
